

CLARITY · INTEGRATION · BETTER CARE

An integrated musculoskeletal clinic where **physician-led regenerative medicine, chiropractic manual therapy, and corrective exercise** work together — under one roof, around one patient.

WHO WE ARE

Ridgepoint Performance Medicine brings specialties that usually live in separate buildings into a **single, coordinated team**. Instead of bouncing between an injection clinic, a chiropractor, and a physical therapy mill, patients are evaluated and treated by providers who share one plan and one goal: **restore function and get people back to doing what they love** — with less imaging, fewer unnecessary procedures, and a clear path forward.

WHAT MAKES US DIFFERENT

Integrated, not assembly-line

One team, one plan. Diagnosis and treatment are coordinated across disciplines from the first visit — not handed off and repeated.

Patient-first economics

We minimize unnecessary imaging and procedures and focus spend where it changes outcomes, keeping care effective and accessible.

Measured outcomes

Progress is tracked with validated tools and check-ins, so patients and providers can see what's working and adjust early.

HOW CARE WORKS

01

Assess

A thorough, hands-on evaluation by the team to find the real driver of the problem — not just the symptom.

02

Integrate

Regenerative injections, manual therapy, and corrective exercise are combined into one coordinated plan.

03

Restore

We rebuild capacity and resilience, educate along the way, and track outcomes until you're back to performance.

THE TEAM

Dr. Eric Anderson, MD

REGENERATIVE & INTERVENTIONAL MEDICINE

Physician-led, non-surgical interventions and biological injections to address pain at its source and support healing.

Dr. Robert Friendt, DC

CHIROPRACTIC · MANUAL THERAPY & REHAB

Hands-on manual therapy and corrective exercise that restore movement, build strength, and make results last.
